Research Interests

My primary research area is the assessment and treatment of aggressive and self-aggressive behavior. This includes the development of cognitive-behavioral interventions for disorders in which aggressive and / or self-aggressive symptoms are prominent (i.e. Intermittent Explosive Disorder). This also includes experimental psychopathology research on the social, affective, cognitive and underlying neural mechanisms associated with the facilitation and

inhibition of aggressive and self-aggressive behavior. To this end, I am involved in the development of a laboratory measure of self-aggression, as well as affective neuroscience studies of aggressive and self-aggressive disorders.
