We have obtained NASA STTR funding to support this work. We have published four joint papers.

- Dr. Eric Freysz (CPMOH, CNRS, Bordeaux, France) and my group used nonlinear optics to probe the spectroscopy and dynamics of interfaces. A particular focus of common interest was the development of Infrared Second Harmonic Generation (IR SHG) spectroscopy, an extension of spectroscopic SHG to the IR. We used this to probe semiconductor interfaces (as reported in our 2003 JCP paper) near the bandgap.

- Dr. Evgeni Gousev (IBM, Advanced Gate Dielectrics Microelectronics Division, TJ Watson Research Center now at Qualcomm) is an expert in the development of novel high k dielectrics for the next generation of microelectronic devices. Our collaboration combines our expertise in the organic and inorganic modification semiconductor interfaces as well as optical probing of interfacial charge and electric fields with IBM and Qualcomm's materials development capabilities. A manuscript reporting our results was published in the Journal of Applied Physics in 2005.

- Professor James Kubicki's group (Penn State, Geosciences) structure and dynamics at charged mineral/liquid interfaces. We jointly advised a student, Kramer Campen (PSU), who used SHG to probe adsorption on charged colloidal particles in suspension. We published several publications combining experiment and theory.

- Professors Stephan Irle (Nagoya) and Keiji Morokuma (Emerson Center for Scientific Computation at Emory University) perform theoretical investigations of single-walled carbon nanotube (SWNT) oxidization and its influence on nanotube adsorption capacity in close collaboration with our experiments. Their objective is the development of a thorough understanding of SWNT oxidization at the atomic level, and the elucidation of the strong influence of oxidization on nanotube adsorption properties observed in our experiments. We published 4 joint papers.
