

GET PAID TO VOUNTEER AS A RESEARCH PARTICIPANT!

Temple University's Aphasia Rehabilitation Research Laboratory is looking for people aged 60 or older to participate in a paid research study of thinking and language skills. Our study seeks to better understand risk factors for and early signs of dementia in hopes of being able to better prevent this devastating disease in the future. We're in search of people with and without mild cognitive impairment.

Participants will be asked to...

- Complete tasks that involve looking at pictures and remembering words
- Answer questions about their background and abilities
- Have their blood pressure and heart rate measured
- Complete tasks on a computer screen
- Undergo an MRI scan at Temple University main campus

Note: All procedures are non-invasive. This study does not involve a blood draw or medications. The MRI scan uses magnets to take pictures of the brain and does not expose participants to radiation.

Payment: Participants will be paid for their time as well as transportation costs.

Study Time: Approximately 3-4 sessions lasting 1-2 hours each.

To find out more, email us at emslab@temple.edu or call 215-204-4350. Please leave a message and someone will return your call promptly!
