

**Urban Hydrology Postdoctoral Position**  
**Department of Earth and Environmental Sciences**  
**Temple University, Philadelphia.**

I am looking for a postdoc to join my research group in urban hydrology funded in part by the William Penn Foundation Delaware River Watershed Initiative and in part by the NSF Urban Critical Zone Network. Our overall goal is to evaluate the physical, chemical, and biological controls on urban stream health in the Philadelphia, PA area. The successful candidate will work with geoscientists and engineers on characterizing urban streams both in the field and through computer modeling. There will be opportunities to work with interdisciplinary teams, develop monitoring programs, help supervise student research, and be involved in citizen science campaigns. The candidate must have a Ph.D. in a hydrology-related topic, experience in field methods, and knowledge of hydrologic modeling applications.

To apply, send application materials to Dr. Laura Toran ([ltoran@temple.edu](mailto:ltoran@temple.edu)). Include the following: 1) CV describing education, work history, and publications, 2) names and contact information for three references, 3) cover letter with statement of interest and description of relevant experience. The application deadline is March 31, 2023.

The position will be a 12-month appointment with potential for a one year renewal. The start date for the position is flexible between May and Sept 2023.
